

JUVENIL is a set of nucleotides, low molecular weight peptides and amino acids obtained naturally.

JUVENIL is a perfect complement to your normal diet with nucleotides, peptides, amino acids as well as micro and macro elements derived from a natural source.

Nucleotides are the basic units that build nucleic acids (DNA and RNA), as well as many important enzymes necessary for the normal physiological functioning of the body. Nucleotides are part of the structure of important cofactors, i.e. the chemicals needed by enzymes to carry out chemical reactions that are involved in cell signaling and energy metabolism. The body needs nucleotides, especially during development, intense physical or mental work, and in old age. With JUVENIL-based products, nucleotides can be delivered directly to the body.

JUVENIL plus vitamin C (liquid) can be used in children over 1 year of age.

JUVENIL capsules and other products containing the supplement can be used in children over 3 years of age.

Nutrients necessary for the proper functioning of the human body are produced as a result of a complicated process of processing consumed food. This

process is long and energy consuming. Its effectiveness is influenced by the quality of the diet and the state in which the person is. Increased demand for nutrients occurs, inter alia, during periods of growth of the body in childhood, its further development, increased activity, and in old age. To maintain homeostasis, the body needs a complex of nutrients and many other substances with a nutritional or physiological effect.

The positive effects of using nucleotide supplementation are described in numerous studies, including those involving humans.

JUVENIL is a unique dietary supplement * based on over fifty years of experience and research. The preparation was developed by leading Czechoslovak immunologists and entered the market in 2020.

Dietary supplements containing JUVENIL are prepared based on natural ingredients and are a unique tool to supplement a normal, daily diet.

Juvenil plus vitamin C liquid dietary supplement, supplementing the normal diet with vitamin C and a set of nucleotides, low molecular weight peptides and amino acids.

Product is based on a summary of worldwide **scientific research** and knowledge in the field of **immunology, nutrition and** rediscovered **holistic approach to human body care**.

Abroad Poland we ship the package contains 3 liquid. The price includes the shipping cost.

Net volume: 100ml

Nucleotides are the basic units that build DNA and RNA nucleic acids, whose importance in the body lies in the ability to regenerate and form new cells. They are also a component of important cofactors that participate in the biochemical processes of our body. The demand for nucleotides increases during the development of children, strenuous physical and mental work and the elderly.

Vitamin C contributes to:

- reduction of tiredness and fatigue
- maintaining normal energy metabolism

Vitamin C helps in:

- the proper functioning of the immune system
- protecting cells against oxidative stress
- the proper functioning of the nervous system
- maintaining normal psychological functions

Ingredients: demineralized water, L-ascrobic acid, Juvenil (set of nucleotides, low molecular weight peptides and amino acids)

Additional information: the product is intended for adults and children over one year of age. Store in a dry and shady place, out of reach of small children, after opening eat within 2 months. Can be diluted with boiled, cool water. store at room temperature.

Usage:

Adults: measure out using the enclosed measuring cup 3 ml, consume once a day.

Children over 1 year: measure using the enclosed measuring cup 1.5 ml, consume once a day.

You can mix with cool drinks and dishes. In order to achieve a physiological effect, the manufacturer recommends a minimum three-month treatment. Do not exceed recommended servings for consumption during the day.

The recommended daily allowance contains:

	children over 1 year, 1,5 ml	adults, 3 ml
Vitamin C	12 mg (15% RWS)**	24 mg (30% RWS)**
Juvenil	0,75 mg	1,5 mg

Laboratory tested.

* Dietary supplement is not suitable for use as the only food source. Maintaining proper health requires a varied diet and a healthy lifestyle. Dietary supplement cannot be used as a substitute for a varied diet. Dietary supplements should be stored out of reach of small children.

** RWS - Daily reference intake of vitamins and minerals (for adults)
